**Subject:** Sonde unit operations

Afternoon everyone,

This is to let everyone know that unless directed otherwise, START will proceed with the following plan concerning sonde operations for the Gold King Mine response.

- Tomorrow the Durango river team will collect the full set of river samples and will collect the data from the sonde units at Bakers Bridge and A72.
- The team will remove the sonde unit from Bakers Bridge and will proceed to demobilize that sonde unit on Thursday when the team demobilizes from Durango.
- The handheld YSI 650, sonde cable, and data cable will be handed off to the mine team so there is no question of equipment compatibility after the mine site assumes collection of the sonde data from A72 after Tuesday.
- After Tuesday the data collection from the sonde at A72 will be performed by the staff at the mine site.

Please contact me if there are any questions concerning this plan or additional direction that affects this plan. Thanks.
